

CAPITAL «RENDERS»

HOLLYWOOD HOUSE

Stunning family home in the sought-after area of HOLLYWOOD with an innovative and geometrically striking architectural design. Our architect client wanted to showcase the different geometric lines around the property, but above all, the small touches of wood combined with the industrial design.

METAL STRUCTURE MODERN HOUSE

We developed five images looking into this stunning design concept from the outside, offering a unique perspective for the viewer. The developer was looking to highlight the massive floor to ceiling windows and unique separated design of the home.

DESIGN CUSTOM HOME

These four images commissioned by the architect enabled his clients to visualise in 3D photo-real what the design would look like once built. Enabling our clients to get a feel for an abstract design by making it come to life in a 3D rendering is an invaluable communication tool.

CONTEMPORARY MOUNTAIN HOUSE

A two-image package including one exterior and one interior view was all that was needed to showcase the impressive design of their stunning mountain home. Oftentimes, a client will request a cg image before approving the development to ensure the abstract drawing represents the clients' true vision.

MODERN INTERIOR

These images were created to visualise the interior design and materials chosen for four specific spaces in the home. In this way, the architect was able to demonstrate the spatial layout for his clients and seek final approval of the design.

3 STORY BUILDING

This classy loft-style infill project needed an exterior image to show how it would look nestled in amongst the existing mature neighbourhood. The two interior images showcase the smart, modern design of the residential units.

EXTERIOR MODERN BUILDING

The client for this specific project required detailed 3D drawings showing how the proposed development would fit into its surrounding environment. By placing the building in a digitally built scene, the architect was able to demonstrate the visual impact of the design and how it would enhance the neighbourhood.

ROCK HOUSE

The stunning "Rock House" needed a 3D rendering to showcase the impressive interior design and how well the exterior of the home complimented the forest environment. In four images, we gave the client a spectacular glimpse into the look and feel of the finished product.

NEW OFFICE

Here, a couple quick exposés of our capabilities for institutional 3D renders were completed in x hours each, allowing the lead project architects to take them back to their clients to gain approval of the overarching interior design strategy for their new office space.

MIAMI BEACH WATERFRONT STUDIO

This beautiful apartment is located in the exclusive and paradisiacal area of Miami Beach, and has been completely remodeled with a sophisticated, clean, and wooden design. Prior to viewing Capital Renders, the property had a dark and cramped atmosphere. However, with our assistance, the owner was able to recognize the property's great potential and the abundant space available for them to take advantage of.

EMPIRE OF DESIGN AUDITORIUM

We have created a visualization of an innovative auditorium and exhibition center, allowing developers to see the optimization of space and design. Our work provides a comprehensive view of the project, highlighting key features and enabling the team to make informed decisions about the final design.

EXTERIOR DESIGN

Constructing a project in today's world involves a combination of design, engineering, and the surrounding ecosystem. For potential buyers, the ability to visualize their future home or investment project is of great importance, as it represents a significant investment of their capital. Our renderings provide a clear and professional futuristic visualization of the mathematical and architectural language, allowing clients to see the future of their investment in a way that is both clear and technologically advanced
